Night Time Interaction

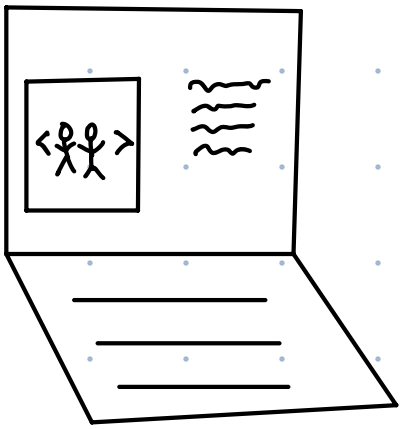

1. Before bed

Take multiple pictures

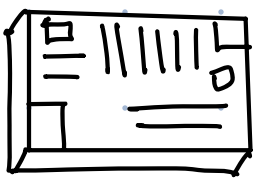

~~throughout the day~~

upload pictures of a trip

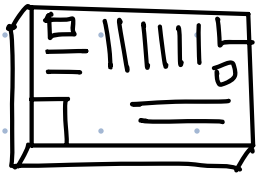

~~Give~~ each image a context, or description.

Have Qwen come up with captions

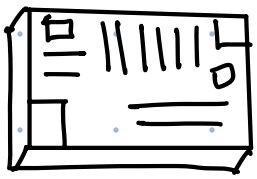

Load the pictures and context into Pi

2. While asleep

The Pi will process the pictures and context using Qwen

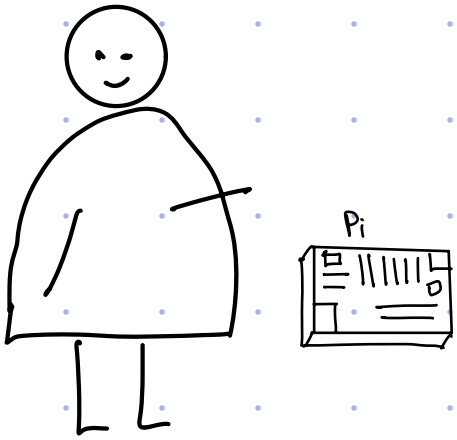

The Pi will out put a 'story' of the pictures

→ This story will then get converted to a song lyrics.

* There is a human input aspect so ppl can edit generated captions

3. When awake

Take the story song lyrics, and input into a different AI song generator.

The stories are available and can be edited if needed

The song gets played out loud

Describes your day before!

The song is also now outputed to the morning python script so anyone can view the morning after.
