Night Time Interaction

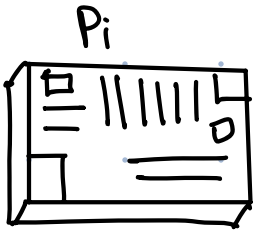

1. Before bed

Take multiple pictures throughout the day

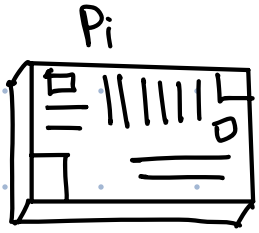

Give each image a context, or description.

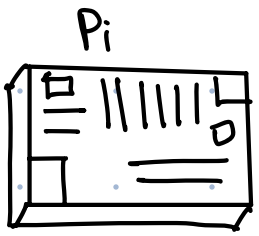

Load the pictures and context into Pi

2. While asleep

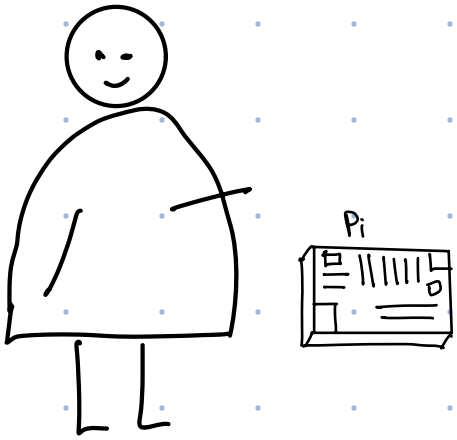

The Pi will process the pictures and context using Qwen

The Pi will out put a 'story' of the pictures

→ This story will then get converted to a song lyrics.

3. When awake

Take the story song lyrics, and input into a different AI song generator.

The song gets played out loud

Describes your day before!
